BATH: PHONETIC INSTITUTE  
MELBOURNE: THE RIALTO, COLLINS STREET  
TORONTO: 70 BOND STREET  
NEW YORK: 2 WEST 45TH STREET

*A Phrase Book for Every Calling*

**Pitman's Shorthand Writers'  
PHRASE BOOKS and GUIDES**

**Electrical and Engineering. Shipping.  
Legal. Railway. Estate Agents, etc.  
Chemical and Drug. Provision Trade.  
Municipal. Stockbroking and Financial.  
Commercial. Printing and Publishing.  
Iron and Steel Trades. Banking.  
Civil Engineering. Naval and Military.  
Insurance. Builders and Contractors.  
Drapery. Leather Trades. Motor Trade.**

The attention of every shorthand-typist is invited to this valuable series which contains specially helpful features.

Each Phrase Book deals exclusively with one particular trade or profession, and is designed to give the utmost possible assistance to the shorthand-typist engaged therein.

*The contents of each include :—*

1. A Valuable List of about 1,500 Technical Terms and Phrases with Shorthand equivalents.
2. A careful explanation of the duties of the shorthand-typist in the particular trade or profession concerned.
3. Numerous Exercises consisting of original commercial letters.

*Each in fcap. 8vo, cloth, about 90 pages.*

*Price 2s. 6d. net.*

## FOREWORD

It would hardly appear that any introduction is necessary in regard to the publication of a book relating to the acquisition of fast reporting speeds when the present-day tendency towards higher rates in both speaking and reporting is considered.

It may, however, be pointed out that in the case of a small number of phonographers it might be inexpedient to resort to a long list of abbreviations as an aid to higher speeds, but with the great bulk of fast writers, and especially those possessed of average memorizing faculties, this production will be of assistance, because it is obvious that the fewer and shorter the characters written, the greater the ease and legibility with which they are formed, with a consequent advantage in transcription.

In days gone by the principle of extensively utilizing abbreviations was frequently condemned, but it has now come to be recognized that this is the only path to exceptional speeds. It is quite true that for ordinary rates—say up to 180 or even 200 words a minute—the outlines as covered by the text-books may be written in full, but beyond that point it becomes increasingly difficult to form the characters neatly, however quickly the brain may visualize them, and if a phonographer is possessed of a good memory it seems bad policy to neglect some short cut which would express three or four words in one brief outline. At the same time it should be understood that the words and phrases need to be properly memorized—there should be no hesitation in committing them to paper or transcribing, and they should be practised assiduously until the abbreviated outline flows off the pen as

readily as the full outline for a word not included in the writer's repertoire.

Another point is that altogether too much fear is usually betrayed by budding high-speed writers in regard to the liability of outlines clashing. It is to my mind absolutely immaterial if the same outline is used to represent three or four different words, as long as the words have meanings which preclude the possibility of their clashing.

The writer has, with the aid of the following abbreviations, been enabled to secure a 250 words-per-minute certificate, in a test equivalent to 280 words a minute on the American system of counting the words "Question" and "Answer" in as part of the dictation matter, and he anticipates that the use of abbreviations is going to enable any intelligent phonographer with a good memory to attain these and higher speeds.

The highest possible speed mark may be reached with Pitman's Shorthand by practice and the judicious use of abbreviations. It is not always practicable to write the shorthand neatly and in full at exceptionally high rates, but by the aid of abbreviating devices, where perhaps 150 outlines will suffice to represent 300 words, it will be easily possible to retain a neat style of writing, and this publication is submitted in the hope that it may help towards that end.

GEO. BROWN.

# BROWN'S SHORT-CUTS IN SHORTHAND

---

## GENERAL PRINCIPLES OF ABBREVIATION

IN the Twentieth Century Edition of Pitman's *Shorthand Instructor* the phrase *of the* was represented by the succeeding word being written close to the word preceding the phrase, but this rule is abolished under the present rules. I recommend its retention for fast work to represent the expressions *to the, and the, from the, and on the* by totally omitting them and placing the succeeding word in a special position, viz.—

*To the.* The logogram *to* is written on the line, and the tendency of the hand is to keep low when approaching it. By writing the succeeding word a shade lower still and CLOSE UP, the omission of *to the* is represented, as, for instance—

*We went to the theatre* 

*And the* is represented by the word following the phrase being written approximately where the logogram *and* would be written, but again close up, as—

*The desk and the table* . 

*From the* is represented by the succeeding word being written at some distance FROM THE word which precedes *from the*, as—

*We rode from the place* ✓  

*On the* is represented by the word preceding the words *on the* being written ON THE succeeding word, as—

*The debate on the estimates* .

In connection with the halving principle it is the practice of many writers to halve a word for a succeeding *it* or *to*, but this principle is not availed of to nearly the extent it should be, and there will be found many examples in the list, which while by no means complete, will suggest further phrases, as—

*We have it stated*

*We have had*

The words *have* and *of* should almost invariably be represented by a hook *v*, and this principle has been availed of to a large extent in the following list, as, for instance—

*Hope to have*

*Ought to have*

The representation of the word *us* should more frequently be made by the circle *s*, as:—

*To us*

The letter *m* representing the word *may*, should be thickened to represent the word *be* following, as—

*It may be said*

The word *should* often proves rather awkward in a phrase, and I utilize a circle *s* to represent it where there is no possibility of confusion arising, as—

*We should be*

*I should have*

The doubling principle should be utilized almost without exception for the representation of the words *they are*, *there* or *their*, as is now provided for in the *Shorthand Instructor*, and the form  $\curvearrowright$  used as little as possible.

An extension of the doubling principle to the signs for *with*, *when*, *what*, and *would* is of considerable value, as witness—

*With their*       $\subset$   
.....

*When there*     $\subset$   
.....

*What there*      $\supset$   
.....

*Would there*    $\supset$   
.....

A few other principles of minor importance and less frequent application will be noted in the list, such as the conversion of circle s into an ellipse to represent *is there*, etc.

## ABBREVIATED PHRASES

THE following phrases are typical rather than comprehensive, and are designed to suggest to the writer numbers of other abbreviations which may be built up in a similar manner.

### A

 .....	abnormal conditions	 .....	according to your
 .....	about a year ago	 .....	account for it
 .....	about as many as	 .....	acres of land
 .....	about how long after	 .....	actual experience
 .....	about how many	 .....	actual observation
 .....	about something	 .....	affect the position
 .....	about that time	 .....	after a good deal
 .....	about which you	 .....	after a great deal
 .....	may be	 .....	against us
 .....	above mentioned	 .....	against you
 .....	absolutely necessary	 .....	all along the line
 .....	accomplished fact	 .....	all around the
 .....	according to circum- stances	 .....	all around the world
 .....	according to that	 .....	all I can say is
 .....	according to the evidence	 .....	all I know is
		 .....	all my time
		 .....	all of

	all over the world		another question
	all that you can		anybody else
	all the time		any longer than
	all the year round		anything about
	all things		anything more
	all things being considered		apart from the fact
	all things being equal		are there not
	alphabetical order		are you acquainted
	among other things		are you aware
	amongst other things		are you certain
	and as there is		are you clear
	and as there is no		are you not
	and as a consequence		are you positive
	and in consequence		are you quite sure
	and is it not		are you sure
	and is there any		are you willing
	and is there not		as a general rule
	and so forth		as a result
	and so on		as far as
	and there may be some		as far as I am concerned
	another one		as far as we are concerned

	as far as you are concerned		as near as possible
	as far as I can recollect		as near as you can fix it
	as far as I know		as near as you can recollect
	as far as you know		as near as you can remember
	as far as possible		as near as you can say
	as good as the other		as near as you can state
	as I am		as there
	as I consider		as there is
	as I said		as there is not
	as I said before		as there will be
	as I think		as they will
	as long as		as to how the
	as long as possible		as to whether
	as may be required		as usual
	as much as possible		as you
	as near as I can fix it		at a glance
	as near as I can recollect		at or near
	as near as I can remember		at the beginning

	you have		you swear positively
			you were not

## ADDITIONAL CONTRACTIONS

THE list of contractions included in the present Edition of the *Instructor* is a great advance on the previous lists, but for very high speeds something briefer still is needed than the full outline for many other words, and the following list is the result of a close scrutiny of the dictionary from A to Z for frequently occurring words represented by awkward outlines. The guiding principle has been the frequency with which the words may be expected to be encountered rather than simply the awkward outline presented, for it is obvious that it is of much more value to a phonographer to represent, say, such a word as *explanation*, which is extensively used, by  than to represent *Calvinism* by —a device which may stand him in good stead perhaps once, if at all, in a lifetime.

## UNDERLINE GRAMMALOGUES

WITH the exception of the logograms for *own* and *young*, the representation of words by outlines written under the line is not provided for in the text-book, no doubt because of the rules relating to writing in position, but there is an excellent opportunity for briefly representing many frequently occurring words in this manner, and the following list has been used by the writer for many years without the slightest bother in transcribing, and it is considered that it will fill a real need in high-speed writing.

<i>P</i>	property	<i>F</i>	farm-ed-er-ing
<i>B</i>	beginning	<i>V</i>	evidence
<i>T</i>	technical	<i>M</i>	employ-ed-ment
<i>D</i>	deposit-ed-ion	<i>MR</i>	employer
<i>CH</i>	child-ren	<i>MY</i>	employee
<i>J</i>	journalist-ic-ism	<i>N</i>	unemployed-ment
<i>K</i>	cultivation	<i>NS</i>	insurance
<i>KS</i>	experience	<i>Y</i>	union-ism
<i>G</i>	guarantee	<i>H (up)</i>	Hesitate-d-ion

## INTERSECTING LETTERS

A NUMBER of intersecting letters are given in the *Instructor*, which should all be utilized, and in addition I have used the following amplified list for many years, finding it of great benefit, viz.—

- P* percentage-perishable-platform
- B* beginning-branch
- T* temporary
- D* development
- CH* change
- J* knowledge
- K* commissioner-explain
- G* guarantee-guilty
- F* conference-favour-formerly
- V* available-value-Victoria
- TH* theatrical
- S* Australia
- M* machinery-manager-mentioned
- N* engine-enquiry-involve-d
- L* electric-luggage
- R* reduction-regret-return

## MISCELLANEOUS EXERCISES

### I

WHEN we met here about a year ago, on which occasion the shareholders present numbered about as many as there are to-day, we little thought of the abnormal conditions which would be prevailing all over the world. There were some people who thought that according to the evidence available such a war as that now raging practically all along the line and all around the world was absolutely necessary, but few thought that it would become an accomplished fact so soon. After a good deal of thought on the part of your directors, and after a great deal of time (I might say all my time) spent in watching the course of business, our actual experience of matters and our actual observation of affairs about that time led us to think that, all things being considered, and according to the best of our knowledge, the war would affect the position to a considerable degree. As you know, our estates cover about 20,000 acres of land, and according to your manager's report, fighting has, according to circumstances, taken place all around the property. As to what damage has been done all I can say is, in fact all I know is, that we have suffered considerably. As above mentioned, a report has been received, and, according to that, it is impossible at present to say definitely anything about the damage, and apart from the fact that a certain amount of damage has been done, the manager cannot tell us anything further. All that you can do is to wait until circumstances, which are now against us and of course against you, turn in our favour, and for this time to come speedily is the wish of all of us.

Another question about which you may be interested is the finances of the concern. The past year has been an exceedingly difficult one, and as a consequence the balance sheet is

the worst presented for a considerable time. Compared with last year, the cash in hand is less by a considerable amount, and the bank accounts, both current account and deposit account, are also reduced to a certain extent. This, in the circumstances of the case, is not surprising. (368)

## 2

I agree with the previous speaker that, having regard to the fact that we managed to be fairly busy during the year, the final figures are disappointing. I was under the impression that we should be in a very strong financial position at the end of the year. I expected a dividend of at least 8 or 9 per cent. However, from the point of view of the shareholder, I do not think 7 per cent. can be called bad. How long is it since we had less than 7 per cent.? Six or seven years, I am sure. Generally speaking, other firms of a similar nature have, for a long time, had gradually diminishing business to record. I am given to understand that the pinch is felt to the greatest extent in this part of the kingdom, and it is only here and there that the rate of dividend is not going down. I could give an illustration, for example, of a company which from start to finish never paid more than from 4 to 5 per cent., and this company, for the purpose of securing control of the market, was to a great extent managed by men possessed of a great deal of experience in this particular trade. A share in it should have been almost a gilt-edge security, but it has just been wound up. Here is a case where, from beginning to end, a concern similar to ours was on the down grade. How is it that here, there, and everywhere one reads of slackness in trade? From your experience, have you any reason to think that when one company is doing well another is doing badly? Commercial men give us to understand that, particularly in our line of business, when one company is doing well, all are doing well. Have you any idea why this rule is not holding good now? Have you any suggestions to make? We shall be glad if you will give us your opinion.

Now with regard to the question of new shops. I am at a loss to understand the reason why it was put forward, and I can only say that I consider its discussion a waste of time. I am under the impression that we had some discussion on

the matter a few years ago—two years ago, I believe, but I am not sure: I am only speaking from memory. I am sure there is someone present who will remember the occasion. Well, what we said then holds good to-day, and will hold good for years to come. Our premises are not used to the fullest extent at present, and there is little prospect of more room being required while times are so bad. How do you know that matters are now about to improve? Have you spoken to our Secretary? He did not hold out hopes, I am sure. Have you been told by the Manager? No. He did not prophesy better times. Have you heard our great manufacturers say, or have you seen it reported in the press that they say, that a boom is close at hand? Have you ever heard a word to that effect? I doubt it. No, I am sure we do not need new shops. Suppose we have them—how will it affect the business and how will it affect you? Think of the previous addition to our premises. How did it affect the business, and how did it affect you? How did it affect the dividend? It dropped from 9 per cent. to 7 per cent. How far is it likely that any further addition at present would have a different result?

Have you any other suggestions to make? (620)

### 3

During the current year, the need for increased dock accommodation in our port has become manifest in a greater and greater degree. The exceptional conditions due to the extent of our transshipment trade and the ever-increasing volume of our shipping both east and west have compelled immediate action, and we have decided to take the necessary steps to enlarge the present dock area, believing, as we have every reason to believe, that our constantly growing trade will provide a fair and reasonable return on the expenditure involved. This is no far-fetched scheme of extravagance at the public expense. The executive council have not hesitated to express an opinion on this matter at each of their recent meetings. Everything points to the need for the suggested extension and no evidence to the contrary has been brought forward at any time. It is true that the cases of actual congestion at the port have been few and far between

during the current year, but we have every reason to believe that in the near future, the congestion will become more and more apparent. This is not the occasion for short-sighted economy. We have to choose between a policy of enterprise, involving an increased burden on the rates, or a falling off in the revenues of the port—either one or the other—and do you mean to say that there can be any two opinions on the matter? Accordingly, we requested the engineers to enquire into the approximate cost of the undertaking, and from their report we have every reason for the hope that the cost will not be excessive. Estimates have been received from five or six contractors, each of whom has been engaged on important municipal works during the current year. One or two of the estimates are much higher than the others, but in the opinion of the engineers the lowest tender is a fair and reasonable one, and the executive council have sanctioned the commencement of the work in two or three months' time.

(336)

## 4

The honourable gentleman has cast doubts on the honesty of my motives in this matter. Does it not seem strange, coming from such a source? Do you think there is any sincerity to be expected from a man whose criticism we have every reason to believe is prompted by personal enmity? Does it not often happen—I may go further and say, does it not generally happen—that a disappointed man allows his disappointment to rankle and influence his judgment? Fair and reasonable criticism I do not object to, nay I invite it, but unless there is evidence to the contrary, the honourable gentleman should do me the justice of being sincere in my actions.

He suggests that I am advocating the reduction in the tax, not on broad national grounds, but because it will benefit my own particular business: that I am sacrificing the interests of my constituents to personal gain. I deny with indignation the unjust accusation. I would say to the honourable gentleman, "Do you recollect your attitude on a former occasion when the reduction came up for consideration? Do you swear that the change in that attitude is not prompted by matters of a personal nature rather than a legitimate

change of opinion ? ” At any rate, does there not seem to be some suspicion as to the fairness of the criticism of the honourable member in view of these circumstances ? (234)

## 5

I have another aspect of the matter to bring before the notice of members of this House, and that is the question of the increased cost of living. I have no hesitation in saying that food prices have gone up 50 per cent. since the commencement of the war, and I suppose there will be still further increases as time goes on. In most cases, the increase has been the natural consequence of demand and supply, but I venture to say that in a multitude of cases, there has been a most regrettable withholding of stocks with a view to securing higher prices. In a few instances I have no hesitation in saying that the practice has reached disgraceful proportions. I recognize the fact that man's commercial instincts are a formidable factor in a matter of this kind, but I think it would be as well if patriotism were allowed to come more in evidence. I would like to ask those gentlemen who are taking advantage of the nation's necessity for their own gain, "Is it fair, is it honourable, is it manly, to fatten on the profits secured at the price of the destitution of the dependents of the very men who are giving freely of their lives in the cause of the motherland ?" (215)

## 6

Dear Sir,

In fulfilment of my promise to write you on the advisability of investing in the Excelsior Company, I will give you my idea as to the activities of this concern. In order to ascertain the facts, I have made most careful enquiries, and though I would not be positive, the results of my enquiries are certainly not unfavourable to the investment you propose. I have no knowledge of the directors derived from personal acquaintance, and consequently I have no idea as to the extent of the confidence they enjoy in the trade. The chairman of directors, however, is a well-known public man, and I have no hesitation in saying that he would not knowingly associate himself with any but absolutely sound undertakings.

Of course, in a matter of this kind, before investment is advisable, an indispensable condition is the certainty that a reasonably sound and stable dividend will be received, rather than one which is subject to considerable fluctuation. The called-up capital of the concern is in round figures £250,000, and the dividends declared on the ordinary shares during the past ten years have averaged 7 per cent. with very little fluctuation. I have no doubt that future dividends will not fall far short of this, but I should not absolutely rely upon it, as there is always a certain amount of uncertainty in the return on industrial shares.

As there are one or two questions I would like to ask you before definitely advising you on the matter, I suggest an interview. I understood you to say you would be in town on Wednesday next in case there is anything requiring your personal attention. Perhaps you will call round here on that day. I suppose there is still plenty of time for applications to be sent in.

Yours faithfully, (307)

## 7

In the ordinary way this bill would not have been introduced until later in the session, but it has been suggested that the opportunity of an early discussion of the matter would be welcomed. Since the last occasion on which the question of the cattle embargo was brought forward, we have not modified our position in the slightest degree. Is it likely that we should when we consider the far-reaching influences which the removal of the embargo would have on our trade? Is it not a fact that a considerable amount of resentment is felt in Canada at the prohibition? Is it possible that it could be otherwise? It is absolutely necessary in a matter of this kind to take the broad view. It does not appear to have occurred to honourable members in this House that the whole question of Imperial unity is involved. It is only natural to expect that the belief that we in this country have no confidence in the proper supervision of the Canadian Port Authorities, will have a harmful effect on the goodwill borne towards this country by the people of Canada. It is a well-known fact that the possibilities for the introduction of cattle

disease from imported cattle are few and far between as a result of the improved conditions under which the trade is carried on. As far as the Canadian trade is concerned all shipments in which there is the least suspicion of the presence of infectious diseases are refused clearance, and it is only after a thorough inspection by the Sanitary Authorities of the port that consignments are allowed to be taken on board. I am firmly convinced that the need for the embargo has long since disappeared. It is natural to suppose that considerable opposition will be experienced from the agricultural interests affected by the removal of the embargo, but it is a matter for consideration whether their opposition is really justified. The broader question of the friendly relations between the two countries is involved, and anything which unfavourably affects those relations in the slightest degree may have consequences infinitely more grave than any temporary effect on the trade of a particular locality. I trust that this measure will receive the most careful consideration of every member in this House.

(381)

## 8

The outbreak of infectious disease in some form or other is almost inseparable from a protracted campaign, and in some respects this possibility causes greater anxiety to the medical organizations of the army than actual casualties in the field. Protective measures against infection are adopted in some shape or form by the soldiers themselves, but in the great majority of cases, especially in a protracted series of engagements, there is little opportunity for these safeguards to be put into operation. It is only natural to suppose that men, constantly breathing an atmosphere impregnated with disease germs from the unburied dead, and with their vitality lowered by constant strain, are very susceptible to infection. Is there anything else to be expected? It has been said—indeed, it is a well-known fact—that in some campaigns the mortality from disease has been greater than from wounds. It has been suggested that in the cause of humanity more opportunity should be given for speedy burial of the dead after the battle, and this certainly is a matter for consideration. Of course, in the very nature of the case, it is hard to say

that unfair advantage would not be taken of the truce by one or other of the combatants. Is there not ample evidence in the present conflict that little or no reliance can be placed on German honour, and it is only natural to suppose that a truce granted for the burial of fallen soldiers would be utilized by the enemy for ulterior purposes? Is it possible to suppose otherwise? (259)

## 9

It must have been apparent to honourable members during the discussion of the Loan Application Bill that the matter concerns Municipal Authorities just as much as it concerns the business community. Municipal expenditure is just the same as expenditure in business enterprise in this connection. Stated in a few words, it is only a matter of economy in all possible directions, and the logical conclusion of all the arguments for the Bill is that the more economies there are effected on what might be called peaceful activities, the stronger will be our financial position for the prosecution of the war. At a time when State expenditure is at the maximum, municipal expenditure must be kept at the minimum. It is regretted that in some cases it appears to have been overlooked that as a result of the destruction of capital at present going on, trade and industry will experience very serious crises in the years following the termination of the war, and it is necessary to look forward. The man who looks forward is very rarely caught napping, and the State is in the same position as the individual in regard to this matter.

Last session I supported a Bill for additional expenditure in connection with the Metropolitan Board of Works, but in view of the necessity for effecting economy in our finances, I am glad that the Board have decided to let the matter drop, more especially as there is no immediate urgency for the additional outlay.

In all my long experience in this House—longer than I care to reflect—I do not think we have ever met under such grave circumstances. It may appear that we are taking an unnecessarily grave view of the situation, but it is certain that unjustifiable optimism is a much greater evil. (300)

## 10

Dear Sirs,

It is our intention to ship a large quantity of merchandise to Sweden in the course of this week, and we understand that the s.s. *Hector* will call at this port and stay about six hours for loading and unloading cargo. We will send you full particulars later on, but we suppose it would be as well if we made preliminary arrangements with your agent here. May we take it that there will be a certain amount of space available in any case for consignments from this port. We have been led to believe that this is so. The shipment will weigh about two tons in round figures.

Awaiting your reply, we are,

Yours faithfully, (118)

## 11

I wish most emphatically to dissociate myself from the proposed amendment. It has been suggested that the old system is still perfectly satisfactory. Of your own knowledge you can see that this is not the case. Under normal conditions no doubt, very little inconvenience would be experienced, but if the least strain were placed on the existing machinery it would break down like an overstrained nervous system. Our trade is increasing all over the globe. North, south, east, and west, the company's operations have been extended. To take our home trade alone, and more especially that of the Northern district, the volume of our business has increased on the average more than 20 per cent. on the volume of last season. One way or another, the accommodation of our present premises has been taxed to the utmost, and once or twice most serious inconvenience has been caused. The only way is to take the bold course, and incur a certain amount of expense on new buildings. The premises next door will become vacant very soon, and the increased accommodation would be ready for next season's trade. It has been suggested that the cost of the alterations would be prohibitive. Nothing of the sort. The estimate based on the original specifications is certainly far from prohibitive. Let us

assume that a bad year is experienced in the next year's trading—not that I am aware of anything which suggests such a state of affairs; quite the contrary—but let us see what our position would be. We should certainly not suffer from shortness of capital as a result of the new construction, as less capital would be utilized for ordinary purposes. We might be a little handicapped in the matter of capital when trade resumed normal conditions, but this would soon be adjusted, as our additional accommodation would enable us to take full advantage of a trade boom. In 99 cases out of 100, it is the bold policy which pays, especially when the boldness is tempered with prudence, and I shall support most strongly the proposals of the Board. (351)

## 12

Dear Sir,

With regard to the proposed establishment of an agency in the east, it is most important that the man selected to push the trade should have as much experience as possible with the exceptional conditions prevailing in that part of the world. It does not appear to have occurred to you that the local requirements are totally different in the great majority of cases from those prevailing in the west. In 99 cases out of 100, the outward appearance of the goods is the most important consideration, and last, but not least, long credit is necessary. The representative you propose to appoint has not had much experience in this class of trade—at least not to my knowledge. He has not specialized at all in our class of goods—at any rate, not that I am aware of. He may be a most excellent representative in his own class of business, and quite suitable for ordinary purposes, but in a matter of this kind it would be as well to interview a few other gentlemen before finally deciding. I have written one or two clients in order to ascertain the names of likely representatives, and on receipt of this information, I will write you again. Putting altogether on one side the question of an established connection, I think you will agree that, other things being equal, the man with the practical experience of our trade ought to have the appointment.

Yours faithfully,

(246)

## 13

Another matter which has engaged the careful attention of your directors is the present system of dispatching small parcels per parcel post. It has been suggested that a considerable saving would be effected if we employed our own vans in delivering packages within a 10-mile radius. We have accordingly considered the matter very carefully, and as a result of our calculations, we have every reason to suppose that under the proposed system not only would there be a considerable saving in the carriage, but the goods would be delivered much quicker than under the old system of parcel delivery. When the new system is in proper working order, there is no reason why the 10-mile radius should not be considerably extended.

With regard to the new power house, we have now received the plans and specifications, and the estimate of cost shows a slight increase on the original specifications. Roughly speaking, the increase amounts to £100 over and above the original estimate. However, it does not appear to be excessive, and your directors have therefore given instructions for the commencement of the work.

The receipts and expenditure on capital during the current year are as stated in the memorandum to the Balance Sheet. We have invested a certain amount of our funds in Real Estate at what we consider to be a fair and reasonable rate of interest. From personal experience, we are convinced of the soundness of this class of investment.

In order to refresh my memory, and no doubt it will refresh your memories also, I have included in the report a table showing the price of wheat and the consumption per head of the population during the last ten years. These figures are referred to in the report which is in your hands. Violent fluctuations over and under the normal price and the maximum and minimum prices are indicated by a thick black line. If it were possible to show the comparison of past, present, and future yields, we should be in a very happy position, but though we cannot of course foretell the future, by a comparison of the wheat crops of the recent past, assisted by personal

experience and personal observation, we can form a very fair estimate of next year's crop, as far as climatic conditions will allow. (388)

## 14

In order to ensure rapid progress in study, it is necessary for the student to continue his labours all the year round. His activities must be concentrated all the time he has available for the maximum benefit to be derived. Amongst other things he must accustom himself to working to a programme, and in consequence he must cultivate orderly and systematic habits. He must remove the idea of all things being equal in importance, and learn to distinguish those things which require more careful treatment than others. As a general rule the student who introduces method in his work is bound to obtain the greatest benefit not only as far as results are concerned but because as a result of the methodical habits acquired he has added another one to his efficiency qualities. And is it not a source of satisfaction to feel that progress is being made? As far as I am concerned, I believe that this satisfaction is a valuable thing in itself. It is doubtful also whether a student realizes the value of constant revision. He should be able to answer the following questions in the affirmative: "Are you certain that the fundamental principles of the subject are known perfectly? Are you clear on the general significance of these basic principles? Are you acquainted with the principal exceptions which are to be found to every rule? Are you quite sure that you have worked the exercises conscientiously and intelligently?" And there may be some portions of the text-book which present peculiar difficulty. In these cases we would ask the student, "Are you sure that you have overcome these difficulties, and is there no explanation which you have not quite grasped?" As a final revision the method of testing knowledge on the points in alphabetical order as they occur in the index is worthy of adoption. By this means it is almost impossible to fail to discover the weak points in the student's knowledge; and, besides being very thorough, it is a most rapid means of revision. (339)

## 15

As far as I can recollect, the question as to whether or not a branch is advisable in the North of England has never been brought before the Board, and as I consider the time is now ripe for such a proposal, just when we are, I believe, at the beginning of a trade revival, I should like your personal views of the matter. As there is not much time before the next Board meeting, perhaps you will favour me with an opinion as far as you are concerned personally. As I said before at a previous discussion, the turnover, as near as I can fix it, for the Northern district is now at or near £100,000, and shows a yearly increase at the rate of about 20 per cent. As near as I can recollect, the South of England Branch was opened on a turnover of about half that, and as there is every prospect of the above rate of increase continuing, the arguments for the establishment of the branch are very convincing. No doubt the Board will want to postpone the matter as long as possible as they have heretofore endeavoured to centralize the management as much as possible, but in my opinion, as long as the North of England trade is worked from London, we are, as I think you will agree, at a disadvantage as compared with our competitors who are directly represented. As there is no obstacle in the matter of finance, the establishment of the branch should not in my opinion be delayed any longer than is necessary for the preliminary negotiations. I have already endeavoured to obtain as much information as may be required when the matter is brought before the notice of the Board, and as far as I know, and have been able to ascertain, there will be little difficulty in the acquirement of suitable premises. These should, of course, be as near as possible to a good seaport, as there will no doubt be a considerable increase in our export trade.

I should like you to furnish me with the name of a good firm of contractors and also an estimate of the probable cost. As near as I can state, the cost of our South of England Branch approximated £10,000. As I am likely to be in town on the 14th and 18th inst., perhaps you will fix up one of these dates for an interview. As far as I am concerned, one date is as good as the other.

## 16

I wish to lay before the House my most strong protest against the proposed Expedition because I am certain that the results accruing therefrom would be out of all proportion to the efforts required. Before you could even hope to secure a landing, a heavy toll in human life would be made. There is no doubt that by some means or other, the tribes have become possessed of modern fire-arms and abundant ammunition either before or after the dispatch of our Note to the hostile State, and before you go on with the Expedition, the extent of the resistance must be carefully considered. It is unfortunate that the lives of our countrymen should have been lost as a result of the action of the hostile tribes, but the persons who embark on these voyages of commercial adventure must take the consequences when they penetrate into unknown territory. It is because I am sure that the great mass of public opinion is unfavourable to the expedition, and because I cannot see the slightest reason why we should undertake it, that I feel so strong about the matter. Surely we can obtain satisfaction by some other means. Is there no economic pressure we can exercise on the State within whose territory the hostile tribes dwell? It is no good beating about the bush in a matter of this kind. The trading undertaking which came to such a disastrous end was out to make large profits out of an admittedly dangerous enterprise. An attack was almost bound to come, and no evidence has been brought forward in support of their claim that they are entitled to this country's protection now that the adventure has not been so successful as they hoped. The dangerous nature of the country can be seen at a glance by anyone who takes the trouble to acquaint himself with the conditions. By all means let us encourage legitimate efforts to extend the trade of the country by means of *bona fide* business enterprise, but because we are anxious to do this there is no reason why we should encourage every adventurer who chooses to bring forward a scheme for exploiting for his own benefit the ignorance of the hostile tribes with whom his operations may bring him in contact. The lives of our soldiers must not be sacrificed to an enterprise of such a nature.

## 17

Dear Sirs,

As it is our intention to sink an artesian well in connection with our works, we shall be much obliged if you can give us any information as to how the borings are likely to turn out. We understand that you have made several borings on account of other firms in the locality, and we shall be glad if you can give us some idea as to the probable cost as near as you can state. We came to the conclusion some time ago that a better system of water supply was advisable, but we have waited until we were in a better position to carry out the desired alterations. We should like you to give us an idea as near as you can say of the strata likely to be encountered in the borings. Our average consumption of water is, as near as I can say, about 1,000 gallons weekly. Can you tell us whether the boring will be economical on the basis of these figures? Obviously, on such a limited consumption, the cost will not have to be excessive if we are to derive any benefit from the boring.

Our Mr. Wilson proposes to call upon you as soon as possible, but it will be a few days before we can fix an interview, as he is at present occupied with an important lawsuit, and both our barrister and solicitor are making considerable demands upon his time.

Yours faithfully,

(244)

## 18

The great difficulty in administering justice on circumstantial evidence is the unreliability of many witnesses. Many persons with whom we have come in contact have no conscientious scruples at all, while others, though perfectly honest, give their evidence in such a halting manner that in many cases the side on whose behalf they are giving evidence may derive no benefit at all—in fact their testimony may be positively harmful. This is particularly so in cross-examination. When undergoing cross-examination, it is decidedly not the function of a witness to be too voluble, and it is advisable to decline to answer questions which are ambiguous. We are certainly not advocating a hesitating

style in a witness, but volubility is much more to be avoided than excessive caution. It is not the business of a witness to give his opinions, but to state facts upon which the jury may come to a conclusion, remembering that when the evidence is conflicting, the prisoner must be given the benefit of the doubt. (168)

## 19

Dear Sirs,

With reference to the amount of £10 15s. which you say is owing by me, did you ever send a statement for this amount, as I have no trace of the item? What is the date of delivery of the goods? In balancing my books no such item appeared. The last item in the account was that of August 27th, which was settled by bill of exchange. On receipt of your further information I will go more fully into the matter.

By the way, did you ever have any trouble with Mr. Strange in your business dealings? He may be a good business man, but he is certainly the most eccentric man I have ever come in contact with.

Yours faithfully. (125)

# FOR SPEED STUDENTS

- PITMAN'S FIVE-MINUTE SPEED TESTS.** With an Introduction on the Acquisition of Speed by P. P. JACKSON, *Holder of Pitman's Speed Certificate at 210 Words a Minute*. This book contains 123 tests of miscellaneous matter, counted for rates of speed varying from 80 to 200 words a minute. Valuable advice on speed acquisition will be found in the Introduction. In crown 8vo, 240 pp. 2s. 6d.
- PITMAN'S SPEED TESTS AND GUIDE TO RAPID WRITING IN SHORTHAND.** Part I contains advice on the acquisition of speed by Miss PEIRCE and Messrs. S. H. GODFREY and W. F. SMART. Part II contains a series of speed tests of upwards of 1,000 words each, counted for dictation practice. In crown 8vo, 240 pp. 2s. 6d.
- PITMAN'S REPORTING PRACTICE.** A Manual of Dictation Exercises for the use of Shorthand Teachers and for Students cultivating Speed in Shorthand. Contains 150 passages, including literary, commercial, and scientific subjects; market, company, and trade reports. The first half of the book is marked in 20's and the second in 30's. With introduction on the conduct of reporting classes. In crown 8vo, 3s. 6d.
- PITMAN'S PROGRESSIVE DICTATOR.** This work contains letters in ordinary print relating to twenty-seven different professions and trades, each selection being preceded by shorthand vocabulary and phrases of a progressive character. The counting is so arranged that each letter is available for various rates of speed. In crown 8vo, cloth. 2s. 6d.
- PITMAN'S SHORTHAND CANDIDATE'S DICTATION EXERCISES.** Contains a large number of original test pieces, specially compiled and arranged for dictation practice by shorthand writers in preparation for the leading examinations. First Series, Speeds from 80 words a minute upwards. Second Series, Speeds 50 to 80 words a minute. Each in crown 8vo. 2s.
- POCKET DICTATION BOOKS,** Nos. 1, 2, 3, and 4. Containing speeches, etc., in ordinary print, counted in 10's for dictation. 2½ in. by 3¼ in. Price each 2d.
- ACQUISITION OF SPEED IN SHORTHAND.** With Facsimile Notes of Famous Fast Writers of Pitman's Shorthand. Revised and Enlarged Edition. By E. A. COPE. In ordinary print. In crown 8vo. 9d.
- SPEED TRAINING IN PITMAN'S SHORTHAND.** By T. F. MARRINER, *Holder of Pitman's Certificate of 200 Words a Minute*. Contains a twelve weeks' Course, setting out a definite scheme of study and speed practice. 6d.
- GRADUATED COMMERCIAL LETTERS FOR DICTATION.** A companion book to *Pitman's Shorthand Commercial Course*, but adaptable for use with any of the phonographic textbooks. 8d.

THE  
New "FONO" Self-Filling  
Fountain Pen

← Barrel made of best quality vulcanite. Size—handy for the pocket but large enough to contain sufficient ink for practical purposes. The illustration is about half the size of the pen.

← Lever self-filling attachment, which enables the writer to refill his pen in the minimum of time from any ink-pot.

← Nib of finest 14-carat gold, tipped with native iridium, making it exceedingly durable in wear. Nibs supplied for any style.

EVERY  
"FONO"  
PEN

is  
thoroughly  
tested  
and fully  
guaranteed

PRICE

7/6

Presentation style, with wide, best quality rolled gold band, and larger nib

10/6

N. B.—If ordering by post, please send a sample nib of the style you are accustomed to, and we will match it as nearly as possible.

Obtainable through any stationer, or from

Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, W.C.2
